This report provides a detailed breakdown of the P.L. 94-171 data as released by the Census Bureau, compared to the reallocated, or adjusted data, provided by the state's official redistricting body. Specifically, this report focuses on Maryland's Prison Population

Note: In the tables above, "NH" is "Non-Hispanic", "SLL" is "State Legislature Lower House", and "SLU" is "State Legislature Upper House".

Districts in red lost population following adjustment and districts in green gained population following adjustment. The map is color coded, so that areas gaining population are shaded green, areas losing population are shaded red, and areas not affected by the adjustment remain in their original color.

Census blocks form the basis of redistricting plans and governmental units like counties. The below analyses show how the changes at the block-level following prisoner adjustment aggregate up to different levels of government.
