Prison Gerrymandering in Louisiana

Understanding the impact of prison gerrymandering on Louisiana's State Legislative and Congressional Districts during the 2021 redistricting cycle

Louisiana Prison Gerrymandering Analysis

How prison gerrymandering affected Louisiana's 2020 redistricting
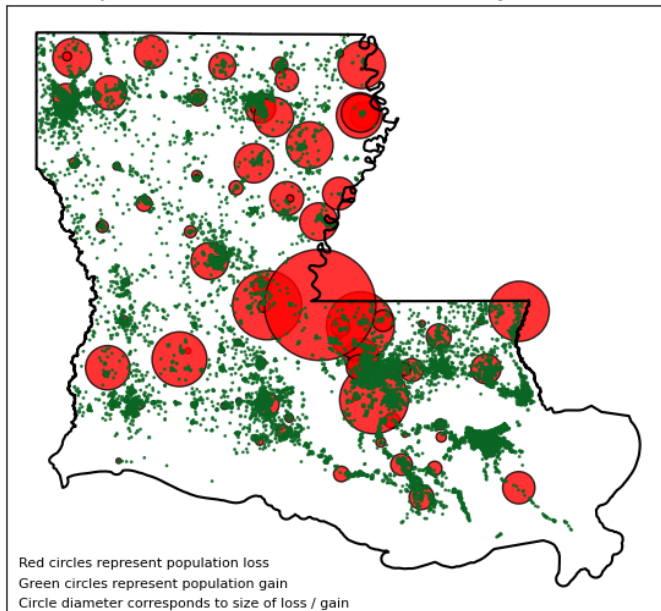

Summary

The RDH performed a counterfactual prisoner adjustment for Louisiana's census data. We received a file of 26,750 data points with prisoner addresses and addresses for places of incarceration. We were able to geocode 22,865 prisoner address and 142 prison addresses and shift the population around the state to reflect this information. In certain cases, we were either unable to determine a prison's address or the stated prison did not appear to be a physical facility. In addition, some prisoners have a valid prison address, but no valid last known address. In such cases, these prisoners are subtracted from the block containing their prison and not added back to the block containing their last known address, resulting in a net population change of -2,573 people. Some states remove federal prisoners as part of their adjustment. This step was not carried out in this analysis.

As is the case in other states, the changes in block population following prisoner adjustment are not uniform: a small number of census blocks, those containing a jail or prison, will lose all or most of their population, while a larger number of census blocks containing the last home addresses of prisoners will grow slightly. Due to the sheer number of census blocks in states, most blocks in a state are unaffected by prisoner adjustment.

In statistical terms, the block-level changes arising from adjustment are "negatively skewed": a census block containing a facility may lose several hundred people, but there likely will not be a single census block that gains several hundred people; they will instead be re-allocated across several census blocks, resulting in many blocks with small population gains. This is illustrated in the table and map below.

Population Change	Number of Blocks
Gained 100+	0
Gained 51-100	0
Gained 11-50	24
Gained 6-10	157
Gained 1-5	15,252
No Change	127,326
Lost 1-5	24
Lost 6-10	9
Lost 11-50	29
Lost 51-100	14
Lost 100+	39

Population Gains and Loses from Adjustment

Red circles represent population loss
Green circles represent population gain
Circle diameter corresponds to size of loss / gain

Although the prisoner address data we received did not contain information about prisoner demographics, we were able to infer some of the effects of the adjustment on different demographic groups within the state by looking at the demographic figures for census blocks that gained population lost population, or were unaffected by population adjustment.

In general, census blocks that gained population following adjustment (i.e. those of a prisoners' last address) had a higher % of Black population than the rest of the state. Please note that the demographics of census blocks that lost

population (i.e. those containing prisons) reflect the demographics of their prisoners, and not the demographics of the areas surrounding the prisons. We created racial and ethnic demographic groups based on the OMB categories that are often used for redistricting purposes. See the below table with various demographic[1] data from the unadjusted 2020 PL data for more information.

Grouping	Pop. Change	Adj. Pop.	W%	B+B&W%	AS+AS&W%	AI+AI&W%	PI+PI&W%	OTH+OTH&W%	OTHMULTI%	H%
Louisiana	-2,573	4,655,184	55.8%	32.1%	2.2%	1.6%	0.1%	0.9%	0.6%	6.9%

Demographics of Louisiana census blocks according to impact of adjustment:

Grouping	Pop. Change	Adj. Pop.	W%	B+B&W%	AS+AS&W%	AI+AI&W%	PI+PI&W%	OTH+OTH&W%	OTHMULTI%	H%
Blocks Gaining Pop	22,845	1,595,106	45.6%	43.5%	1.7%	1.3%	0.0%	0.6%	0.4%	6.8%
Blocks Losing Pop	-25,418	1,458	40.3%	49.3%	1.2%	0.6%	0.0%	0.2%	0.2%	8.2%
Blocks Unaffected	0	3,058,620	61.1%	26.1%	2.4%	1.7%	0.1%	1.0%	0.7%	7.0%

The population shifts throughout the state would have affected Louisiana's redistricting. To meet equal population requirements, U.S. Congressional Districts are meant to be drawn with a +/- 1 person deviation, while State House and State Senate Districts generally must have a total deviation of less than 10%, where the total deviation is the sum of the largest deviating district and the smallest.

The effects of the adjustment on these three levels is described below:

---

[1]   W% : Non-Hispanic White %
B+B&W% : Non-Hispanic Black plus Non-Hispanic Black and White %
AS+AS&W% : Non-Hispanic Asian plus Non-Hispanic Asian and White %
AI+AI&W% : Non-Hispanic American Indian plus Non-Hispanic American Indian and White %
PI+PI&W% : Non-Hispanic Pacific Islander plus Non-Hispanic Pacific Islander and White %
OTH+OTH&W% : Non-Hispanic Some Other Race plus Non-Hispanic Some Other Race and White
OTHMULTI% : Non-Hispanic Other multiple-race %
H% : Hispanic %

State House Districts (105 Total Districts)
- Original Population Deviation: 9.80%
- New Population Deviation: 13.10%
- Districts greater than 5% adjusted deviation:
  - District 3 (5.31%)
  - District 73 (5.25%)
  - District 69 (5.16%)
  - District 47 (5.13%)
  - District 31 (5.13%)
- Districts lower than -5% adjusted deviation:
  - District 32 (-7.79%)
  - District 28 (-6.99%)
  - District 62 (-6.60%)
  - District 20 (-6.30%)
  - District 21 (-6.00%)
  - District 19 (-5.59%)

State Senate Districts (39 Total Districts)
- Original Population Deviation: 9.87%
- New Population Deviation: 15.22%
- Districts greater than 5% adjusted deviation:
  - District 39 (5.72%)
  - District 22 (5.25%)
- Districts lower than -5% adjusted deviation:
  - District 32 (-9.50%)
  - District 34 (-7.52%)
  - District 28 (-6.18%)
  - District 17 (-5.61%)

U.S. Congressional Districts (6 Total Districts)
- Original Population Deviation: .01%
- New Population Deviation: 1.99%
- Largest district adjusted deviations:
  - District 5 (-1.52%)
  - District 2 (.47%)

The rest of this report details prison gerrymandering and explains in further depth how this adjustment affects Louisiana's legislative districts and other geographic units.

What is Prison Gerrymandering?

Although states have different criteria to guide the creation of new districts, all states must strive to meet the principle of "one person, one vote," by creating districts with roughly equal populations. In the case of congressional districts, the goal is equality as "nearly as practicable," meaning deviations as small as one person across districts. In the case of legislative districts, the goal is "substantial equality," which has been defined as deviations of less than 10%. The equal population requirement means that counting how many people live where - data provided by the decennial census - is critically important.

In August 2021, the US Census Bureau released the 2020 Census Redistricting Data (P.L. 94-171) File for states to use in redistricting congressional and state legislative districts. In 2020, as in past decennial censuses, the Bureau counted inmates who were in jail or prison on April 1 as residing at the facility in which they are currently incarcerated.

According to the [Prison Policy Initiative](#), the population of people in jails and prison in 2020 was roughly 2.3 million. Many of these individuals are serving sentences far short of a decade. In the case of jails, most individuals are being held on pre-trial detention, and may eventually be found not guilty or given a sentence other than confinement. But because the decennial census counts these individuals as residing at the jail or prison, they will be counted toward the population of the surrounding district for the next ten years.

The problem of where incarcerated people are counted for redistricting purposes is compounded by three additional complexities:
1. Incarcerated individuals are often confined at facilities that are geographically distant from their homes.
2. Incarcerated individuals are almost never guaranteed the right vote.
3. Incarcerated individuals often have a different demographic profile from the individuals residing near the facility.

Taken together, this has the practical effect of shifting voting power away from areas and demographic populations that have high incarceration rates, and toward areas where jails and prisons are located and the demographic populations that live in those areas.

To give a simple example, imagine a state with 100 residents, and two congressional districts, A and B. If everyone can vote and no one is incarcerated, District A and B will each contain 50 individuals, and these individuals will all have equivalent voting power - that is, each individual's vote counts toward 1/50 of the district's electoral outcomes.

Now imagine that 10 individuals from District A are incarcerated in District B, and are not allowed to vote. District B will have to become geographically smaller to meet equal population requirements, and shift 10 non-incarcerated individuals on the margins of District B to District A. But only 40 of the 50 individuals in District B can vote. Thus, each individual's vote in District B counts toward 1/40th of the outcome, whereas individuals' votes in District A still count as 1/50th. This is how prison gerrymandering dilutes voting power and distorts representation.

In terms of demographics, the Voting Rights Act prevents minority vote dilution in redistricting, which requires knowing the race and ethnicity of the population, in addition to where individuals live. To the extent that individuals are counted as living at a jail or prison rather than at their home address, distortions in equal population may also distort minority representation.

Fortunately, 13 states have decided to reallocate at least some incarcerated individuals to their last known in-state home address for congressional and/or legislative redistricting in 2021. There is a great deal of variation in how this reallocation is accomplished. Nonetheless, all methods attempt to rectify the problem of prison gerrymandering.

Prison Gerrymandering in Louisiana

Louisiana is one of the 37 states that, as of November 2022, does not adjust its official census data for redistricting to combat prison gerrymandering.

The RDH was contacted by [Voice of the Experienced (VOTE)](#) and [Voters Organized to Educate](#) to analyze the impact prison gerrymandering reform would have had on Louisiana's 2020 redistricting cycle.

According to the 2020 PL data, there are 51,241 adults in correctional facilities in Louisiana. To give some context to that number, the "target populations" for the various statewide districts in Louisiana are as follows:

- State House: 44,360 people
- State Senate: 119,430 people
- Congress: 776,293 people

Prison gerrymandering reform would likely involve at least three steps:
1. Geocode prisoners' last known addresses to census blocks
2. Add population to the geocoded census blocks
3. Subtract population away from the facilities where prisoners with valid addresses are being held

We received a "2022 Prisoner List" file that VOTE and Voters Organized to Educate obtained from Louisiana's Department of Corrections. The file contains 26,750 prisoner addresses, as well as the address for the jail or prison at which prisoners are being held. This data does not include pre-trial data from parish jails or federal prison data. As a result, this dataset does not capture the entirety of the incarcerated population in Louisiana.

Of these 26,750 addresses, there are 3,885 that are out of state, prisoners with home addresses at another facility, or are incomplete and cannot be properly geocoded at this time. For the other 22,865 addresses, we were able to geocode the address to a particular census block (step #1 above). As part of prison gerrymandering reform, these census blocks would gain population (step #2 above). To better understand the effects of these changes, our analysis aggregates these increases in population to a variety of different geographic levels: Congress, State House, State Senate, Parish, Zip Code Tabulation Area, and Census Place.

Methodology

For the purposes of geocoding, only columns 1, 5, 9, 10, 11, 12 are needed. They are renamed as the following below:

Column 1   DOC_NUM (Dept of Corrections ID)
Column 5   FACILITY   (Facility for incarcerated person)
Column 9   ADDRESS (Street address of incarcerated person address)
Column 10   CITY (City of incarcerated person home address)
Column 11   STATE (State of incarcerated person home address)
Column 12   ZIP (Zip of incarcerated person home address)

Processing was completed using the pandas, json, and requests libraries in Python. Address file was read in as a pandas dataframe. A complete address field was made by combining the ADDRESS, CITY, STATE, and ZIP fields. Some addresses were removed from the file prior to attempting to geocode due to incomplete addresses, non-physical facilities, out of state addresses, PO Boxes, addresses at other DOC facilities, amongst others.

The addresses were reformatted into URLs for the Census geocoding API using 2020 the benchmark and the vintage as Census2020_Census2020 with return type geographies. Remaining addresses which we were unable to geocode using the Census API were geocoded to latitude and longitude using the Google API, and then a spatial join with a block shapefile to retrieve block GEOIDs.

Using the methods above we attempted to retrieve 2020 Block GEOIDs from a matched address. Of the 26,750 total addresses in the file:
- 22,865 (85.5%) were successfully geocoded
- 3,885 (15.0%) are invalid addresses we were unable to geocode:
    - 1,071 (4.0%) are out-of-state
    - 262 (1.0%) are non-physical facility addresses (facilities starting with OAS)
    - 221 (.8%) are addresses for prisons/other facilities
    - 1,966 (7.4%) contain no data at all for a street address
    - 329 (1.2%) are invalid addresses (ex. PO Box, unknown, to be secured, homeless, etc.)
    - 11 (0.04%) are invalid addresses of only 0s for street number
    - 18 (0.1%) contain no city
    - 7 (0.03%) assorted errors

To create a block-level file, addresses which had a block successfully matched were queried out. A field was added to the block file with a count of how many people were assigned to that block, which is what was used in the creation of the reports.

The Effects of Prisoner Adjustment

As the dataset is adjusted to count prisoners at their last home address, census blocks containing jails or prisons lose population and census blocks containing those last addresses gain population.

Congressional District

Congressional District Adjusted Deviation
